Research Interests

I study the intersection of Human-Computer Interaction (HCI), Computer Supported Cooperative Work (CSCW), and social computing. My research blends both theoretical and empirical approaches to understanding how technologies such as online communities shape and are shaped by sociocultural contexts. I examine algorithmic fairness and bias while also exploring its downstream implications in content moderation and the ethical use of Natural Language Processing (NLP). My current research directions involve investigating the role of and advancing the integration of computing systems in human-centered, equitable, and socially responsible ways.
